Beer Spoilage Alert

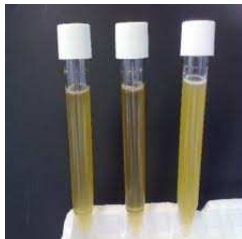

Innovative Molecular Microbiology

Beer Testing

- In 2010, 19 brewers in Victoria found that 30% contained lactic acid bacteria.
- These organisms increase of turbidity and unpleasant sensory changes of beer.
- These changes can negatively affect not only the quality of final product, can damage your brand, and ultimately loss of sales.
- NATA accredited laboratory environment

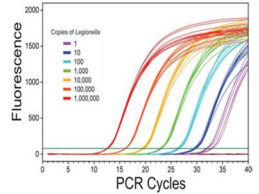

EcoDiagnostics is proud to be working in partnership with Australian brewers to offer customised, practical and cost-effective microbiological quality control assurance programs

Custom Beer Testing Solutions

DNA Based Detection

- Proven sensitive technology for rapid detection of the complete range of beer spoilage organisms
- Detects DNA from spoilage organisms
- Results available in 6, 24, or 48 hours

Traditional Detection

- 3-5 days
